

# THE SCIENCE OF LEADERSHIP EXCELLENCE PROGRAM

For ambitious leaders in the real estate, manufacturing, investment banking, hospitality and services sectors.

The Science of Leadership Excellence Program provides a high-impact personal development experience, that will enable delegates to drive results through understanding and applying the science of leadership and innovation.

# PROGRAM OBJECTIVES

The Program provides an accelerated induction into the skills and mind-set necessary for leaders to operate in a dynamic, fast-changing environment, combined with applying best practice from around the world.

Delivered by an experienced and professional team, the program utilises cutting-edge brain science and other contemporary techniques. This will provide participants and their organisations with a leadership advantage in a competitive world.

The program combines robust psychometric and scientific research with clear presentation of results, to help attendees focus on the key aspects of their personal leadership approach that will enable them to drive success. Delegates will learn practical new tools to help them be more effective as leaders and to ensure their business strategy is implemented successfully.

The program will draw on best practice and innovation ecosystems from around the world. It will focus on specific opportunity sectors for Kuwait, covering the success factors and challenges in each of these sectors.

By attending this program, participants will:

- Gain a deep personal understanding of their own leadership style
- Understand the science of leadership and leadership success
- Learn new techniques for effectively influencing people and leading teams
- Take away a practical toolkit to enable effective leadership of innovation
- Understand global best practice in key sectors
- Be part of a valuable peer network of like-minded leaders for future support
